

# Problem with Draft

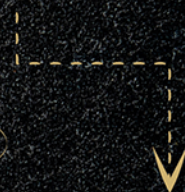

**BEER TASTE FUNNY**

**BEER BURPS/SPUTTERS**

**NO BEER COMING OUT**

**FOAMY BEER**

- Beer Taste Metallic
- Butterscotch Flavor
- Creamed Corn Flavor
- Stale Taste/Wet Cardboard smell

- Empty Gas Tank
- Beer Line Frozen
- Gas Valves Shut Off

- Lines are Dirty
- Regulator Pressure is Wrong
- Keg temp is Too High
- Keg Just Tapped

- Build up in Lines
- Bad Seal Around the Faucet

# SOLUTIONS

- Request That lines be cleaned with a chemical free method
- Keg is filled with bad beer
- Request replacement
- Ensure that kegs are pressurized with CO2 or G-Mix

- Connect a Full Keg
- Connect a Full Gas Tank
- Turn the Glycol system off for 1 hour
- Turn the Toggle so that it is parallel with the gas line

- Contact a draught tech to clean lines every 2-3 weeks
- Adjust pressure
- "Downstairs keg systems should be set at about 24 P.S.I., and direct draw systems (under the bar) should be set at about 10 P.S.I."
- Lower the Cooler Temperature
- Lower the Glycol reservoir to 35 F

- Check to see if a full keg could be sitting on a beer line
- Replace washers in the keg coupler and faucet
- Check the insulation and seals on the line with a sponge and warm soapy water, and plan to get lines cleaned
